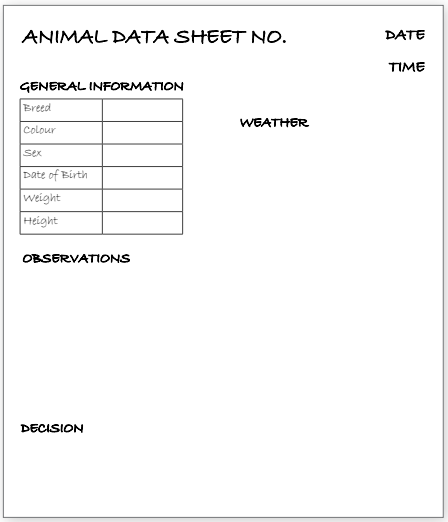
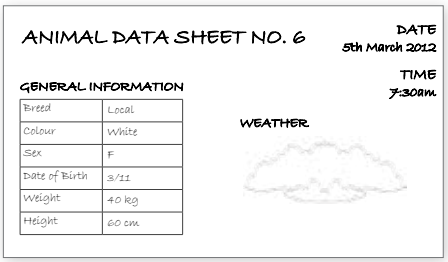
AESA for Animals

Step 1: Label the flip chart with the following:

- Data Sheet No.
- Date/Time
- General Information
- Weather
- Observations
- Decision

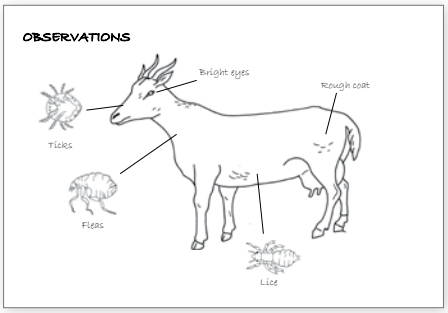


Step 2: Ask mini-groups to fill in the data sheet number, the date and time, general information about the animals and draw the weather.



Step 3: The group should draw the animal and point out problems such as ticks or rough coats.

Step 4: After every field observation, each mini group returns to the meeting site to summarise the data collected and draw the agro-ecosystem.



Step 5: The mini-group should think about what immediate management actions to take and write these down.

Step 6: Each mini group presents its findings on their AESA sheet to the entire field school.

Step 7: After each presentation the members should seek clarifications or make alternative suggestions to the decisions being made by the mini group. Use your technical knowledge to guide the discussion toward the most appropriate crop management decision.

ANIMAL DATA SHEET NO. 6

DATE
5th March 2012

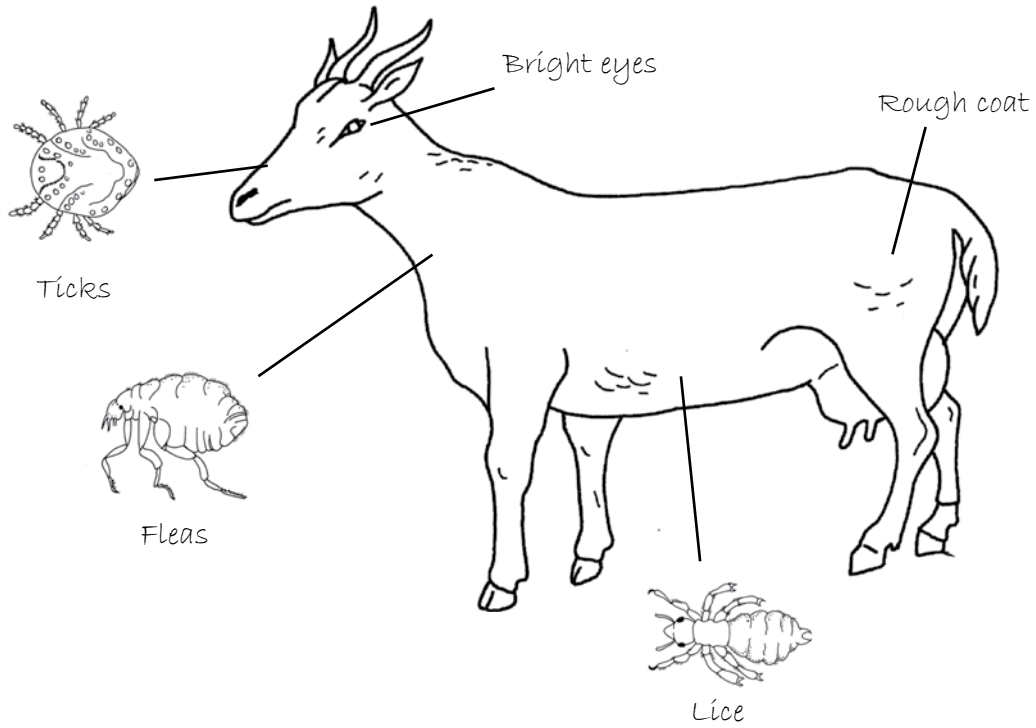
TIME
7:30am

GENERAL INFORMATION

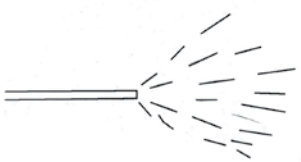
Breed	Local
Colour	White
Sex	F
Date of Birth	3/11
Weight	40 kg
Height	60 cm

WEATHER

OBSERVATIONS



DECISION



- Apply solution to coats to control parasites

- Continuous observation of the animals for early detection of new attacks
